

The 5-Day Sugar & Gut Reset

A simple, lifestyle-led reset for the 3pm crash, the sweet cravings, and the 'off' tummy days.

If you swing between energy highs and crashes, fight a sugar craving every afternoon, or feel bloated and sluggish for no clear reason — this short reset is for you.

Over the next five days, you'll layer five simple food and rhythm habits that calm cravings, steady your energy, and give your gut a kinder week. No counting, no banned foods, no guilt.

How to use this guide

One small action per day, for five days. No overhaul, no perfection — just a gentle reset you can actually keep up with.

Day 1 — Protein-first breakfast

What you eat in the first 60 minutes of your day sets your cravings for the next 12. A protein-led breakfast keeps blood sugar steadier and cuts the 3pm sweet hunt.

Try today:

- Aim for a palm-sized portion of protein at breakfast (eggs, yoghurt, leftover chicken, tofu, biltong, peanut butter on toast).
- Add one piece of fruit or a handful of berries instead of juice.
- If you usually skip breakfast — start with just the protein, even small.

Coffee on an empty stomach is a craving multiplier. Eat first, sip second.

Day 2 — Hydrate before you snack

Mild dehydration looks and feels exactly like sugar cravings. Most afternoon "I need something sweet" moments are actually thirst in disguise.

Try today:

- Drink a full glass of water when you wake up — before coffee.
- Keep a 750ml bottle visible at your desk and refill it once before lunch.
- Next craving: drink water, wait 10 minutes, then decide.

Day 3 — Add fibre, don't subtract sugar

Fibre feeds the good bacteria in your gut and slows sugar absorption — so you crash less. We're adding, not punishing.

Try today:

- Add one extra vegetable to lunch and one to dinner (raw, roasted, frozen — anything counts).
- Pick one fibre-rich swap: brown rice, oats, beans, lentils, wholegrain bread.
- Snack on something with fibre + protein together (apple + peanut butter, biltong + carrots).

Increase fibre slowly with plenty of water — your gut needs a few days to adjust.

Day 4 — Walk after your biggest meal

A 10-minute walk after eating has an outsized effect on energy, bloating and afternoon focus. It's the cheapest blood-sugar tool you own.

Try today:

- After your biggest meal today, walk for 10 minutes — outside if you can.
- Pace counts more than speed. This isn't exercise; it's digestion support.
- Stack it with something you already do (a call, a podcast, a school pickup).

Day 5 — Close the kitchen

Late-night grazing is one of the biggest disruptors of sleep, energy, and gut comfort. Giving your gut a clear rest window changes how you wake up.

Try today:

- Pick a "kitchen closes" time tonight (e.g. 8pm).
- If you're peckish later: water, herbal tea, or one square of dark chocolate.
- Aim for a 12-hour gap between dinner and breakfast tomorrow.

If you only repeat one of these five days again — make it this one.

After your 5 days

If even two of these five habits stuck, your cravings, energy and gut are already moving in a better direction. Don't try to keep all five forever — choose the one that helped most and protect it.

Gut health is built in weeks, not days. Be kind and stay consistent.

Curious about APLGO NRM?

APLGO NRM is a daily-use APLGO lifestyle product many of our members pair with the habits in this guide. It's optional — the 5-day reset works on its own.
